## Resorbable Weldix® Suture Anchor: Revolutionary Ultrasonic Technology for Joint Stabilization and Tendon Reattachment

Thursday, 6 July 2023, 09:00 - 13:00

Sponsored by VetWelding AG

<b>Species:</b>	Small Animal
<b>Course type:</b>	Wet lab
<b>Objectives:</b>	Gain knowledge and practice advanced techniques for joint stabilization and tendon reinsertion using the resorbable Weldix Suture Anchor.
<b>Content:</b>	<p>In this course, participants will learn about BoneWelding® ultrasonic technology and familiarize themselves with the resorbable polylactide Weldix® Suture Anchor through lecture, clinical case presentations, and by performing various joint stabilization and tendon reinsertion techniques on cadavers.</p> <p>The Weldix® Suture Anchor is advantageous in that it causes minimal damage and footprint in bone, while providing superior pull-out strength due to the interdigitation and hardening of the polymer in cancellous bone. Implantation is quick, efficient, and occurs within seconds. Its zero bone protrusion makes it an excellent choice for joint stabilization and tendon reinsertion in smaller bones and in areas of thin skin coverage.</p> <p>Learn more at <a href="https://www.vetwelding.com">https://www.vetwelding.com</a></p>
<b>Lecturers:</b>	Riccarda Schünemann, DECVS Yuri Beosier, DVM
<b>Participants:</b>	min. 8, max. 10 The course is targeted at surgeons who are already familiar with joint surgeries.
<b>Participation fee (€)</b>	Diplomates and non members € 425, ECVS Residents € 320
